(215) 833-5541 | sidhant31032004@gmail.com | [github](#) | [linkedin](#) | Philadelphia, PA

Professional Summary

AI/ML engineer with hands-on experience building multi-agent systems, end-to-end ML pipelines, and LLM-powered applications. Interned at SAP building production-grade pipelines for deal analysis using LangGraph and LangChain. Shipped full-stack AI products from prototype to deployment, including a Grand Prize-winning hackathon project. Currently completing a B.S. in Computer Science at Temple University (August 2026).

Experience

AI Development Intern — Digital Platforms — SAP | Remote / Philadelphia, PA | June 2025 – December 2025

- Built a full end-to-end ML pipeline for deal analysis documents: data ingestion, preprocessing, text cleaning, vectorization, train/test splits, model training, and optimization
- Engineered a pattern recognition system that surfaces common and high-risk issues across a corpus of international global deals, enabling faster due diligence
- Developed multi-agent orchestration workflows using LangGraph and LangChain for document understanding and structured data extraction

IT Housing Agent — Temple University | Philadelphia, PA | March 2023 – May 2025

- Resolved IT support tickets across residential Wi-Fi, workstations, printers, and network systems for a large residential student population
- Trained users on help desk portals, MAC registration software, and network monitoring tools
- Diagnosed root causes of recurring system failures across university infrastructure

Shadowing Student — CTO Management Team — SAP | Walldorf, Germany | July 2021 – August 2021

- Embedded with the CTO management team at a global enterprise software organization
- Observed cross-functional product development across engineering, product, and executive functions
- Attended internal and customer-facing meetings, gaining exposure to global enterprise operations and international communication protocols

Projects

DroughtGuard | Python, Flask, scikit-learn, Gemini API, LeafletJS | [devpost.com/software/droughtguard](#) | [github.com/nightmarehel/droughtguard](#)

HackPSU Fall 2025 — Grand Prize Winner

- Built an AI-powered early-warning system predicting food insecurity risk across Kenya up to 3 months in advance using NDVI, rainfall, temperature, and food price indicators
- Trained a Gradient Boosting Classifier on synthetic regional features with multi-horizon forecasting (1, 2, 3 months); deployed to Vultr with a Flask backend and LeafletJS choropleth dashboard
- Integrated Google Gemini for AI-generated analyst briefs with in-memory response caching; modular architecture separates ML prediction from LLM advisory layer

AGI-Simulation | Python, LangGraph, LangChain, Groq (Llama 3.3 70B), Tavily | [github.com/nightmarehel/agi-simulation](#)

Academic Research Project — Seminar Topics in Computer Science, Temple University

- Developed a multi-agent system as the technical foundation of a research report arguing that sufficiently coordinated agentic architectures constitute a form of proto-AGI

- Architected an 8-agent LangGraph pipeline with specialized roles — Query Rewriter, Domain Router, Planner, Researcher, Fact Checker, Critic, Presenter, Memory Agent — demonstrating distributed reasoning across 6 domains
- Implemented a self-correcting feedback loop (Critic re-routes to Researcher when confidence < 0.7) and cross-session JSONL memory, used as empirical evidence of autonomous quality control and progressive learning in the research report

TeleGAssistant | Python, Groq API, Telegram Bot API, APScheduler, SQLite | github.com/nightmarehel/telegassistant

- Built a Groq-powered Telegram bot delivering automated daily briefings, weather updates, and personalized reminders on a configurable schedule
- Designed modular architecture separating AI client, bot interface, database, and scheduler; SQLite-backed persistence for reliable state management across restarts

Education

Bachelor of Science, Computer Science

Temple University | Philadelphia, PA | Expected August 2026 | GPA: 3.34 Cumulative | 3.59 Major GPA

IB Diploma

Heidelberg International School | Heidelberg, Germany | Higher Level: Math AI, Business & Management, Computer Science

Skills

Languages: Python (primary), JavaScript, TypeScript, Java

AI / ML: LangChain, LangGraph, Groq API, Claude API (Anthropic), Gemini API, scikit-learn, multi-agent systems, RAG pipelines, vector embeddings, ML pipeline engineering

Web / Backend: FastAPI, Flask, React, Telegram Bot API, REST APIs, SQLite

Tools & Platforms: Git, GitHub, VSCode, APScheduler, Vultr
